

NeoGraft[®] 2.0

Before. After

20 years of experience

600+ devices sold

100,000+ patients

. Beyond

Over eight years ago we launched the NeoGraft automated follicular unit extraction system in America. Today, we are the most trusted hair restoration brand in the world. Are we satisfied with that progress? Hardly. Our commitment to improving patient outcomes drove us to collaborate with top plastic surgeons and dermatologists. We combined next generation surgical techniques with decades of data, and designed **NeoGraft® 2.0** to be more than a device. It is engineered to make us partners.

Wireless connectivity enables remote access for diagnostics, maintenance, automatic upgrades, and procedural data. The touchpad operates like your favorite tablet, and software communicates with the hand tools to provide real time extract and implant graft counts. A new surgical implantation hand-tool creates even more consistent implantation sites. The work station organizes the tubing and tools, while the double-jointed arm puts everything within the surgeon's reach. The balloon pump motor has been replaced with a piston-driven pneumatic motor that delivers more precise pressure control for both extraction and implantation. Every detail has been enhanced to improve the patient outcome, because what is good for the patient is good for your practice.

Touchscreen

All the technology you need at your fingertips.

The intuitive touchscreen interface adds a layer of intelligence to **NeoGraft® 2.0**. It communicates with the extraction and implantation tools by automatically counting the graft extracts and implants. The data is wirelessly transmitted to **NeoGraft®**, eliminating the time-consuming hand counting and paperwork. The software is completely upgradeable. Below is a list of our constantly increasing digital capabilities.

-))) Automatic graft count.
-))) Remote diagnostics.
-))) Multi-language display.
-))) Extraction pressure controls.
-))) Supply reordering.

Optimized Work Flow

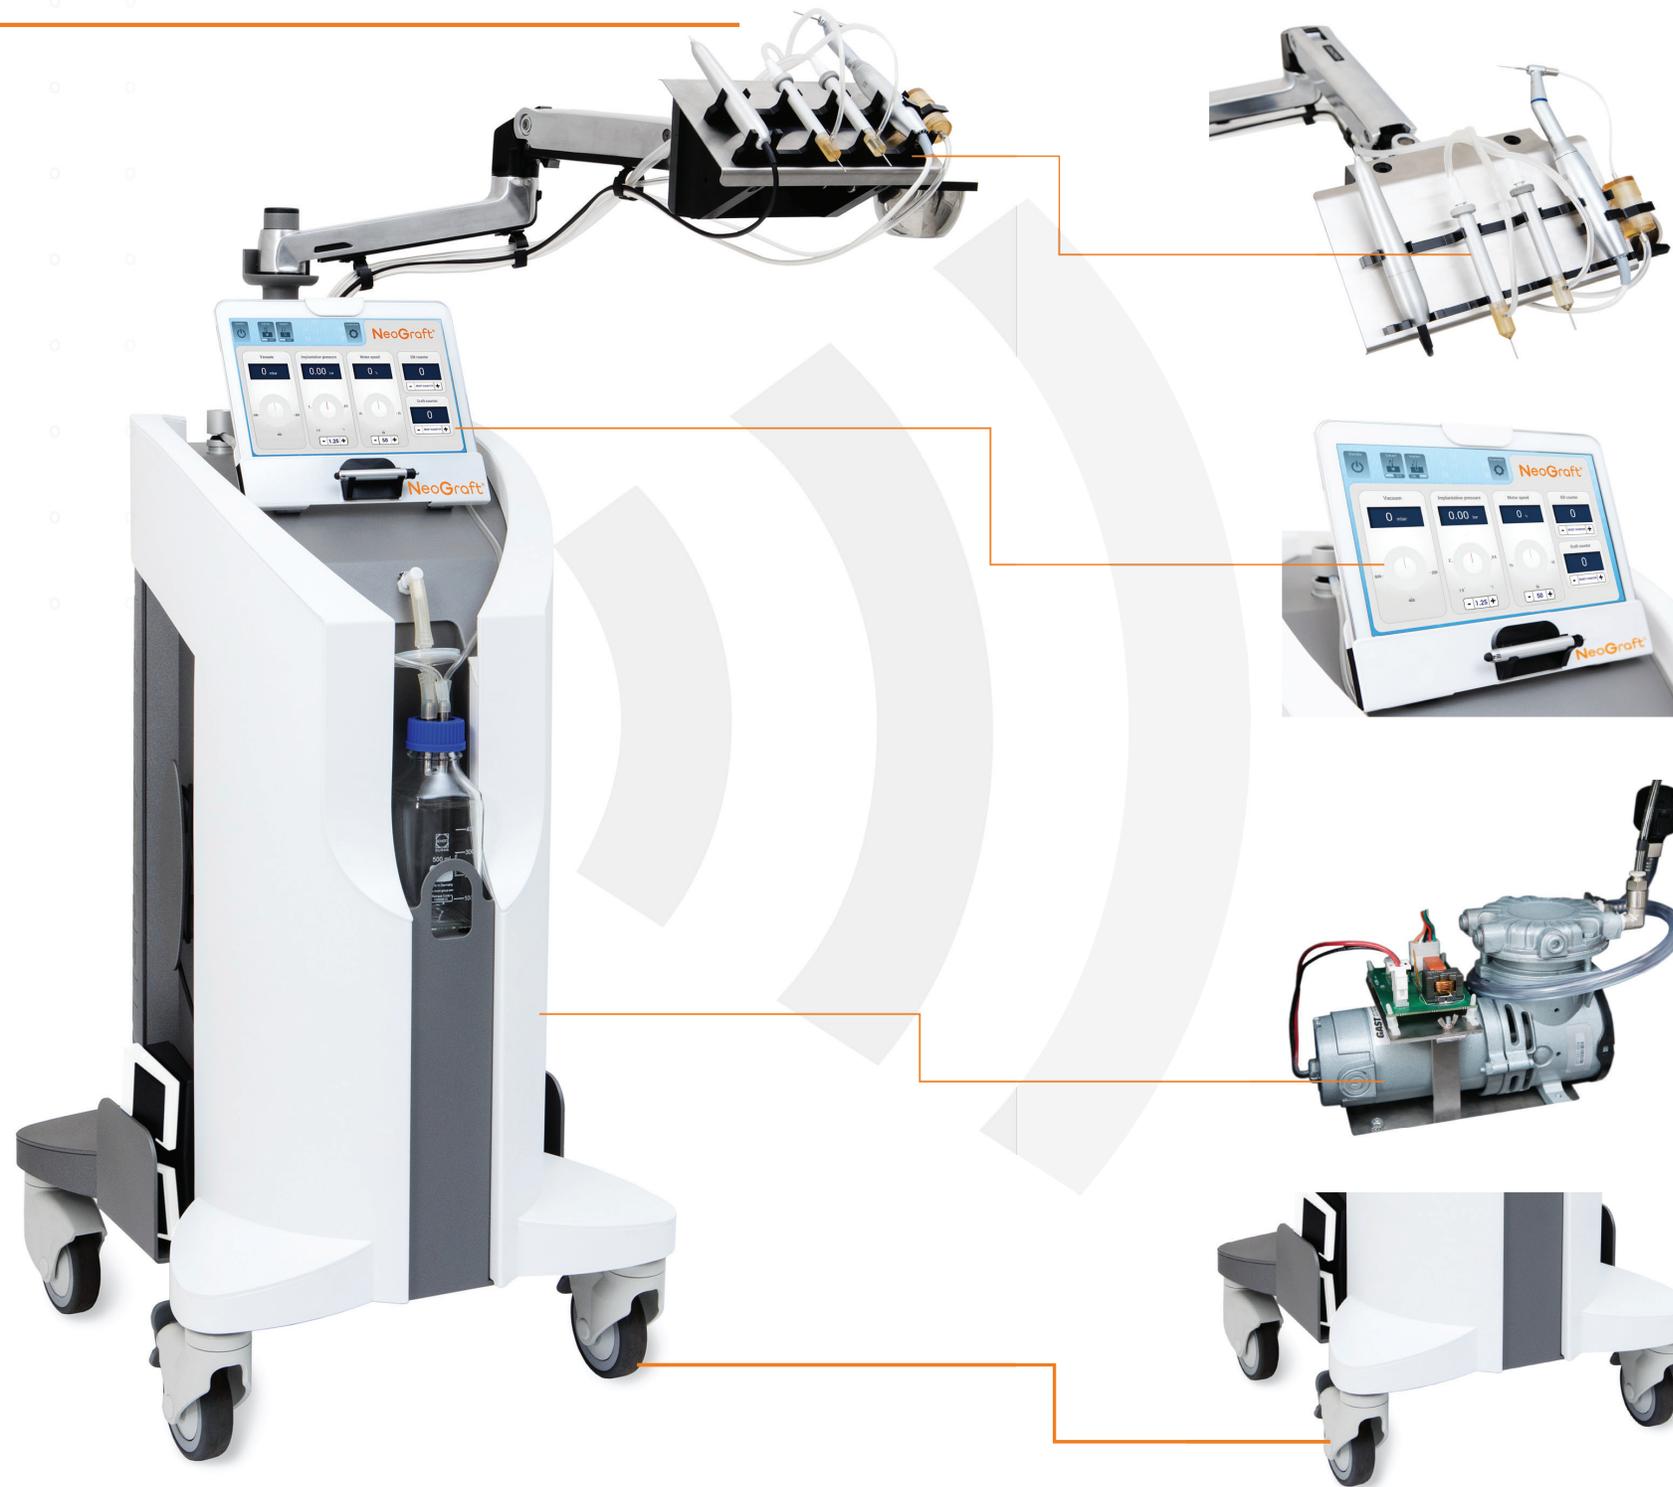

Organize the operating room.

The double jointed arm and work station increase the efficiency of your operating room. We added an implantation tool to the work station to increase recipient site consistency. Now the surgical tools, controls, and patient are all within the surgeon's reach. **NeoGraft® 2.0** is a more ergonomic device that improves the surgical environment for both the patient and surgeon.

Technical Specifications

We respect doctors that crave detail.

- » Introduction of recipient site creation hand piece that delivers more standardized implants.
- » Hand tools are completely autoclavable.
- » Tools and tubing are neatly organized.
- » Wireless connectivity.
- » Automatic implant and extraction graft count.
- » Automatic communication with NeoGraft® for procedural data, maintenance, and supplies.
- » Diagnostic data per procedure.
- » Piston-driven pneumatic motor.
- » More efficient.
- » Quieter.
- » More consistent suction.
- » Store in less than 5 sq. foot total area.
- » Less than 50 lbs.
- » Easy to transport and store.
- » Stowable pedals.
- » 360° wheels.

The Hair Restoration Brand Patients Trust Most.

96% worth it rating on RealSelf.com (subject to change)

RESPECTED

 Best decision I ever made - Smyrna, Georgia

 Got my hair back...No more bald Spot - Toronto, Ontario

ALL OVER

 Blown away by NeoGraft® - Sterling Heights, Michigan

 Fantastic results with NeoGraft. - Merritt Island, Florida

THE WORLD

 I had a wonderful experience. - Chandigarh, India

Everything we do starts with **ONE** question, how does this help our patients?

Our patients already give NeoGraft® the best word-of-mouth marketing in hair restoration. Our results are the envy of the industry. Still, we further optimized every part of the patient process. The quieter motor reduces noise in the operating room, delivering a more peaceful procedure for the patient. The double-jointed arm creates a more efficient and less cluttered surgical experience. Although a hair transplant can take as long as 8 hours, we researched, designed, and engineered every minute to be as enjoyable as possible.

Doctors Know Best

Dr. Jack Fisher – Board Certified Plastic Surgeon. Nashville, Tennessee

NeoGraft® completely changes the dynamics of introducing hair restoration into your Aesthetic practice by providing new advanced technology with the systems and support necessary to create a successful outcome for both the doctor and the patient.

Titans of Hair Transplant

Dr. Jonathan Sykes – Board Certified Plastic Surgeon. Sacramento, California

NeoGraft® is the only part of my practice that doesn't keep me up at night. The patient outcomes are consistently great, the procedure is low risk, but averages \$10,000 per procedure. Add it all up at the end of the year, and it generates several hundred thousand dollars — all of it stress free.

Dr. Stephen Ronan – Board Certified Plastic Surgeon. San Francisco, California

NeoGraft2.0® is a technological leap for hair transplant surgery. After purchasing the original device, my practice's patients and profit jumped 40%. This new device builds all the back-office work into the device: graft counting, supply ordering, and maintenance. It's all virtually automatic, this is a technological breakthrough for the business of hair transplant surgery.
