

NeoGraft[®] 2.0

Before. After. Beyond.

8 years of experience

600+ devices sold

100,000+ patients

As the industry pioneer, Neograft® launched the first automated follicular unit extraction system into the American hair restoration market. Our procedure revolutionized the patient experience and satisfaction, all without leaving a large linear scar in the back of the patient's scalp. After performing more than 100,000 transplants without a visible scar, Neograft® is now the most trusted name in hair restoration. Our dedication to patient results inspired our collaboration with top aesthetic doctors to create Neograft® 2.0. Together, we combined next-generation surgical techniques with decades of data to improve every detail of the hair transplant procedure for both the doctor and the patient. Neograft® 2.0 is designed to be more than a device, it is engineered to make us partners today, tomorrow, and beyond.

Touchscreen

All the technology you need at your fingertips.

The intuitive touchscreen interface adds a layer of intelligence to **NeoGraft® 2.0**. It communicates with the extraction and implantation tools by automatically counting grafts as they are extracted and implanted. The wireless data transmission eliminates the need for time consuming manual documentation and the software is completely upgradeable.

-))) Automatic graft count.
-))) Remote diagnostics.
-))) Multi-language display.
-))) Extraction pressure controls.
-))) Supply reordering.

Optimized Work Flow

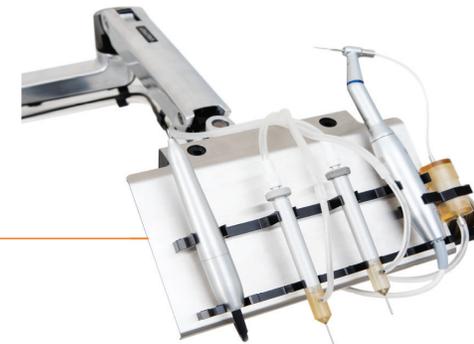

Enhanced ergonomics.

The double-jointed arm and work station increase the efficiency of the procedure. We added an implantation tool to the work station to improve recipient site consistency. Now the handpieces, controls, and patient are all within the doctor's reach. **NeoGraft® 2.0** is a more ergonomically designed device that enhances the procedural environment for both the patient and surgeon.

Technical Specifications

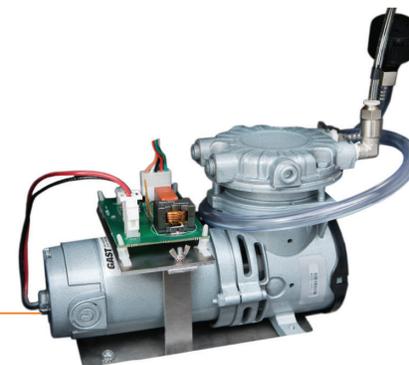

We respect doctors that crave detail.

- » Introduction of recipient site creation handpiece that delivers more standardized implants.
- » The handpieces are completely autoclavable.
- » Tools and tubing are neatly organized.

- » Wireless connectivity.
- » Automatic implantation and extraction graft count.
- » Real-time communication with NeoGraft® for procedural data, maintenance, and supplies.

- » Piston-driven pneumatic motor.
- » More consistent suction leads to better standardized extractions and patient outcomes.
- » Quieter.
- » More efficient energy usage.

- » Store in less than 5 sq. foot total area.
- » Less than 50 lbs.
- » Easy to transport and store.
- » Stowable pedals.
- » 360° wheels.

The Hair Restoration Brand Patients Trust Most.

RESPECTED

“
Best decision I ever made - Smyrna, Georgia

“
Got my hair back...No more bald Spot - Toronto, Ontario

ALL OVER

“
Blown away by NeoGraft® - Sterling Heights, Michigan

“
Fantastic results with NeoGraft® - Merritt Island, Florida

THE WORLD

“
I had a wonderful experience. - Chandigarh, India

Everything we do starts with **ONE** question, how does this help our patients?

Our patients already give NeoGraft® the best word-of-mouth marketing in hair restoration. Our results are the envy of the industry. Still, we further optimized every part of the patient process. A more quiet motor reduces noise in the procedure room, delivering a peaceful clinical experience for the patient. The double-jointed arm creates a more efficient and more ergonomically sound set-up. Although a hair transplant can take as long as eight hours, we researched, designed, and engineered every minute to be as enjoyable as possible.

Doctors Know Best

Dr. Jack Fisher – Board Certified Plastic Surgeon. Nashville, Tennessee

Titans of Hair Transplant

NeoGraft® completely changes the dynamics of introducing hair restoration into your aesthetic practice by providing new advanced technology with the systems and support necessary to create a successful outcome for both the doctor and the patient.

Dr. Jonathan Sykes – Board Certified Facial Plastic Surgeon. Sacramento, California

NeoGraft® is the only part of my practice that doesn't keep me up at night. The patient outcomes are consistently great, the procedure is low risk, but averages \$10,000 per procedure. Add it all up at the end of the year, and it generates several hundred thousand dollars — all of it stress free.

Dr. Stephen Ronan – Board Certified Plastic Surgeon. San Francisco, California

NeoGraft 2.0® is a technological leap for hair transplant surgery. After purchasing the original device, my practice's patients and profit jumped 40%. This new device builds all the back-office work into the device: graft counting, supply ordering, and maintenance. It's all virtually automatic, this is a technological breakthrough for the business of hair transplant surgery.

The Most Trusted Name in Hair Restoration
